

IRISH RETAIL SALES PERFORMANCE — INSIGHTS MEMO

Prepared by Adham AlHers · Data Analyst Portfolio Project · August 2026

Headline finding

Cork underperforms Dublin, Galway, and Limerick in Electronics — a store-specific gap, not a city-size effect.

Metric	Value
Electronics share of revenue — Dublin	59.5%
Electronics share of revenue — Galway	59.8%
Electronics share of revenue — Limerick	59.5%
Electronics share of revenue — Cork	43.7%
Gap vs. other-store average	~16 percentage points (27% relative)
Estimated recoverable revenue	~€26,400 / year

Why it's not just Dublin being bigger

If Cork simply had less overall footfall, every category would be proportionally lower. Instead, Cork's Homeware share (37.1% of store revenue) is above the other three stores' average (26.2%) — meaning Cork customers are shopping, just not for Electronics at the same rate as elsewhere. That points to a range, stock, or in-store merchandising issue specific to the Electronics category in Cork, not a demand or footfall problem.

Recommendation

1. Audit Cork's Electronics stock depth and range breadth against Dublin/Galway within 30 days.
2. Run a targeted in-store Electronics promotion in Cork ahead of the Q4 seasonal peak (November–December), which historically drives 30-40% higher revenue across all stores.
3. Re-measure Cork's Electronics revenue share after Q4 and compare against this baseline (43.7%) to validate impact.

Supporting context

- Dublin remains the strongest-growing store: +6.7% YoY revenue growth (2024 → 2025).
- Galway (-13.6%) and Limerick (-8.0%) both declined YoY and may warrant a follow-up analysis beyond the scope of this memo.
- Portfolio-wide average margin held steady at 27.5% across both years.
